

## Expert Exchange Sustainability - be prepared for a sustainable future

### Responsible Supply Chain Management around the globe

With the cooperation of **EAC International Consulting** and **ConClimate** you receive cumulative expertise in the transition to a responsible footprint in Asia accompanied by a comprehensive digital sustainability management. We support you holistically and competently to a sustainable future.

## Solutions for your digital Sustainability Management

As the business model and investment planning of more and more companies is shaped by the topic of sustainability, we have merged our experience into a valuable knowledge portfolio. The cooperation of *EAC International Consulting* and *ConClimate* represents an optimal fusion of many years of consulting experience with local teams in Asia and extensive knowhow in the field of sustainability. Benefit from current and first-hand insights into changes in the regulatory environment and experience in supply chain management in China and India (EAC) and the support of a software-based digital sustainability management customized for your needs (ConClimate). We provide you with competent support in the areas of climate management, holistic CSR consulting and digital sustainability management.

By asking current questions regarding your sustainability targets, we would like to provide the basis for the right approach including a flexible adaption to the needs of your company with targets such as CO<sub>2</sub>-Footprint, ESG-Monitoring and Supply Chain Management.

### Current Questions on your Sustainability Targets

#### ESG STRATEGY / KPIs / SUPPLY CHAIN RESILIENCE

- Does your company have a consistent global **ESG strategy**?
- Have you adapted to evolving **stakeholder interests**?
- Can you present your stakeholders a compelling transformation path?
- Is your **sustainability report** comprehensive? Does it contain all **relevant KPIs** in order to attract investors?
- Is your **supply chain** resilient against upcoming regulations & other risks?

#### EU TAXONOMY / CSR REPORTING / EMPLOYEES FITNESS CHECK / FINANCIAL POTS

- Is your company prepared for the **EU taxonomy** and the new **CSR reporting obligations** in 2023?
- Is your **sustainability infrastructure/process** powerful and efficient enough?
- Do you know your key performance indicators to be able to make constantly **solid sustainability decisions**?
- Can your employees efficiently evaluate the complex and large amount of sustainability data? **Are your employees fit to implement sustainability?**
- Do you plan to take advantage of **sustainable financial pots**?

## Substain® - an innovative software to meet your sustainability needs

Sustainability and digitalisation are currently the two major topics of our time - if both are linked, great entrepreneurial opportunities arise. For this reason, *ConClimate* has combined both fields in its own software solution Substain® for a professional and digital sustainability management.

Substain® is a software-as-a-service solution that covers virtually all scenarios of modern sustainability management and adapts flexibly to the needs of companies. All data from the area of sustainability/ CSR and ESG are stored centrally and can be linked with multiple evaluation scenarios. These include carbon footprints, Life-Cycle-Analyses, GRI-Reportings, Supply Chain Assessments and company specific reporting schemes!

### The software is based on six clear principles

#### SINGLE SOURCE OF TRUTH

According to the SSOT principle, data should be available in only one version at a central location.

#### COLLABORATIVE STRUCTURE

Due to the collaborative structure of the software, users worldwide work as a team on joint projects.

#### SINGLE INPUT, MULTIPLE OUTPUTS

According to the SIMO principle, data should be evaluated simultaneously according to various criteria

#### USER-CENTERED DESIGN

Software that requires a manual is bad software. Therefore, we have defined all processes in a user-friendly way.

#### DO NOT REPEAT YOURSELF

Redundant processes are inefficient and increase errors, therefore the software is based on the DRY-principle.

#### CUSTOMIZATION THROUGH CONFIGURATION

Software should adapt to the company. Therefore, practically all areas of the software can be individually configured.

## Expert Dialogue – talk directly to our taskforce

Do these issues sound familiar to you? This is exactly where our exclusive Expert Dialogue comes in: Our knowhow taskforce can discuss with your leadership and responsible decision makers the relevant implications for your corporate strategy in a first exchange. We will provide a first indication for possible solutions after a comprehensive screening of your current setup.
